

Bulletin | Danfoss Turbocor Compressors

Customer Notification

B-CN-012-EN REV A

May XXX, 2015

SUBJECT: New Inverter Tester

Purpose

The purpose of this document is to inform Danfoss Turbocor customers of the new Inverter Tester that is being released and is available for immediate order.

Summary

Background

The purpose of the tester is to verify switching functionality of the Inverter on Danfoss Turbocor compressors. The tester provides all power necessary to interface with the inverter module during testing. Due to the limitation of the tester, only static tests can be performed. In order to perform a dynamic test, it is strongly recommended that the suspect Inverter module be returned to Danfoss Turbocor Regional Service Center for further evaluation.

The Inverter Tester can be used on all TT/TG models.

There is an 8 week lead time for ordering this Inverter Tester.

Inverter Tester Manual

Instructions on how to perform the test(s) on Inverters and readings from the tester is included in the Inverter Tester Manual (M-IG-001-EN Rev A.). The Inverter Tester Manual will come with the new tester and will also be available on the DTC website.

Action Required

No Action is required by customers at this time. For pricing information, please contact your Key Account Manager.
