Customer Notification

B-CN-142-EN Rev A

2/27/2019

SUBJECT: Seal Cover Kit for TT/TG Compressors

Purpose

Danfoss is improving the seals on the TT/TG compressor covers. There is a new seal profile and foam which will be installed on the covers of all new compressors. Additionally, spare part replacement cover kits will include the new seal type and foam.

This change will be implemented no later than end of March 2019 on all TT/TG compressors produced in Tallahassee and Haiyan.

Summary

The new cover seals and foam are being added to improve serviceability of the compressors and to improve the resistance of the compressors to dust infiltration after being serviced and throughout the life of the compressor.

In addition, a new kit has been created to allow the purchase of only the seals and foam. The new seals and foam are fully backwards compatible with all currently supported compressors. This new spare part kit is available for purchase separately from the cover kits. Previously, those seals were only provided with compressor cover kits.

Action Required

The new spare part kit will be available under part number 100385-1 Seal Cover Kit. The part numbers for the cover kits will not change.
