

Bulletin | Danfoss TurboCor Compressors

Customer Notification

B-CN-312-EN REV A

4/20/2023

SUBJECT: TT Series SMT v3.6.1 Release

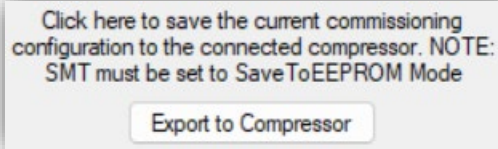

Purpose

The purpose of this bulletin is to inform our customers that the TT Series SMT, which was recently released as version 3.6.0, has been updated to version 3.6.1 with a few minor bug fixes.

Summary

Commissioning Report and Event Log Exports

In certain situations when using SMT version 3.6.0, the SMT displayed an error and the application closed abruptly. In particular, this occasionally happened when attempting to export the event log. Additionally, an error was displayed and the application closed (without saving the commissioning to the compressor) when exporting an existing commissioning report to the compressor. This error was triggered when using the SMT button shown below.

These bugs have been corrected and the application should correctly update the compressor as expected with the existing commissioning reports and export event logs.

Action Required

This latest version of the SMT has been uploaded to the website. Please log in to our OEM website and download the SMT version 3.6.1.

Need Assistance

DTC Applications is available to support our OEM customers. Contact DTC Applications (dtcapplications@Danfoss.com) directly or your designated Key Account Manager with any questions and to schedule a representative to provide onsite or remote support.
